CLAIMS VITAMIN CURES TYPHUS,
AIDS IN TREATING TUBERCULOSIS

Among the latest Rumanian scientific developments is the large-scale production of a new medicine called Vitamin H₁ (paraamino acid). The vitamin is produced synthetically from toluene, which is abundantly available in Rumania, and proves to be a remarkable tool in the fight against several major diseases.

Vitamin H₁ is an important factor in the growth of the human body as well as a strong antibiotic. It completely cures typhus and aids in the treatment of tuberculosis and asthma. In the treatment of tuberculosis, this vitamin not only strengthens the action of streptomycin, but also offers antibiotic benefits. In the treatment against typhus, it stops the development of rickets.

Of special significance is the fact that Vitamin H₁ is used in curing skin diseases, especially eczema. It also has a regulatory effect on the internal secretion glands. Experiments proved that if a patient with white hair takes this vitamin continuously for a period of 2-6 months, his hair will turn from white to a natural color. Persons suffering from heart and nervous disorders also receive great relief because the vitamin relieves tension and weariness and rebuilds broken-down tissues.

This new drug is easily administered because it is nontoxic, it has no ill effects, and it has the same concentration in the blood, whether it is administered by injection or orally.
